### **F. Good & bad science**

• 3 p/q = 33 points.

1. Did the "fifth" planet in our solar system create the asteroid belt?

**Answer: False.**

From wikipedia " Förr i tiden trodde man att asteroidbältet var resterna efter en

planet eller måne som hade kolliderat eller krossats. Den uppfattningen har de flesta inte längre, för om man lägger ihop alla asteroiders massor så blir diametern på "klumpen" väldigt liten i förhållande till en vanlig planet.

Man tror numera att asteroiderna och stenarna är byggmaterial till en himlakropp som aldrig blev något. Orsaken är att när solsystemet bildades så låg all materia som en skiva för att sedan "klumpa ihop sig". Klumparna blev senare planeter, men asteroidbältet drogs mellan solens och Jupiters dragningskraft, vilket gjorde att klumparna inte blev planeter"
